

Technology Transition Initiative

Accelerating delivery of mature technology to the Warfighter

HELLFIRE II - Height-of-Burst (HOB) Sensor

Summary: An HOB sensor will be transitioned to the Hellfire II missile currently under development by the Joint Attack Munition Systems Project Management Office (JAMS PMO) and scheduled for First Article Test (FAT) later in FY10. A tactical HOB sensor design, performance and environmental testing, and full material release support will be produced under this effort. The HOB sensor will be incorporation into the FY11 missile buy. TTI funding accelerates the deployment of this capability by two years.

Current status: project in work
